# Fluorinert<sup>™</sup> Liquids

# For Electronics Manufacturing

## Product Information

Introduction

3M™ Fluorinert™ liquids are a family of clear, colorless, odorless, inert perfluorinated fluids having a viscosity similar to water but approximately 75% greater density. These non-flammable liquids have set the standard in the electronics industry for 40 years, meeting the demanding and diverse requirements of many heat transfer, manufacturing and testing applications.

Fluorinert liquids are thermally and chemically stable, compatible with sensitive materials, including metals, plastics and elastomers, and are practically non-toxic.

Fluorinert liquids are completely fluorinated, containing no chlorine or hydrogen atoms. The strength of the carbon-fluorine bond contributes to their extreme stability and inertness. This chemical structure also results in very low intermolecular forces, low surface tension and essentially no solvent action on non-fluorinated compounds.

The dielectric strength of perfluorinated liquids is high—in excess of 35,000 volts across a 0.1 inch gap. Water solubility is on the order of a few parts per million. The nominal boiling point of each fluid in this series is determined during their manufacture. Fluorinert liquids are available with boiling points ranging from 30°C to 215°C and pour points as low as -101°C.

3M™ Fluorinert™ Liquids Typical Properties (Not for Specification Purposes)

All values determined at 25°C unless otherwise specified

Fluorinert Liquid	FC-87	FC-72	FC-84	FC-77	FC-104	FC-75	FC-3283	FC-40	FC-5320	FC-43	FC-70	FC-5312

Materials Compatibility	3M <sup>™</sup> Fluorinert <sup>™</sup> Liquids are compatible with most metals, plastics and elastomers.
Toxicity Profile	Fluorinert liquids are non-irritating to the eyes and skin, and are practically non-toxic orally. They also demonstrate very low acute and sub-chronic inhalation toxicity. These products are not mutagens or cardiac sensitizers.
Safety and Handling	Fluorinert liquids are nonflammable, and are highly resistant to thermal breakdown and hydrolysis in storage and during use. Recommended handling procedures are given in the Material Safety Data Sheets, which are available upon request.

### **Environmental**

Fluorinert liquids have zero ozone depletion potential. These materials are not defined by the U.S. EPA, nor regulated, as volatile organic compounds (VOCs) and do not contribute to ground-level smog formation.

Fluorinert liquids, which are perfluorocarbon (PFC) materials, have high global warming potentials and long atmospheric lifetimes. As such, they should be carefully managed to minimize emissions.

3M recommends that users of Fluorinert liquids further limit emissions by employing good conservation practices, and by implementing recovery, recycling and/or proper disposal procedures. 3M offers a program for used fluid return. Specific guidelines for the safe handling and use of 3M products are provided in the Material Safety Data Sheets.
